Discover The
Wonder of I Safe

children's excellent experience

S0075

I Safe Climbing

Product Dimension:
length width height
L:100 W:193 H:225

Two-Way Climbing Area:

One surface of the unit is a large climbing wall with yellow handles to support hand and foot coordination. There is a stepped climbing ladder on the other surface.

This climbing tower is a safe play unit built with durable wooden support legs and sturdy fasteners, designed to develop children's motor skills. Offering high stability thanks to its triangular form, this structure has a climbing wall with colored handles on one side, a stepped ladder on the other side and a small observation platform at the top. This compact tower, whose lower part can be transformed into a fun play tent with the thematic fabric panels found in some models, is suitable for use both alone and as part of large play sets.

I Safe Climbing

Product Dimension:
length width height
L:100 W:193 H:225

Double Sided Activity

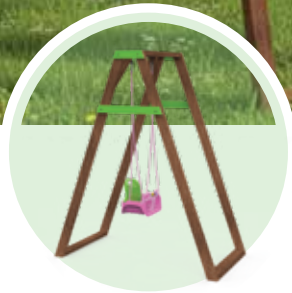

There is a climbing net (rope ladder) on one side of the module and a climbing wall (with handles) on the other side.

This climbing module is a double-sided activity area designed to develop children's gross motor skills and coordination. There is a climbing net (rope ladder) on one side, and a climbing wall supported by colorful handles and a climbing rope on the other side. Offering a solid structure with its dark wooden body and green connectors, this unit is completed with a flat platform where children can experience the feeling of summing when they reach the top. This design supports children's strategic thinking and problem-solving abilities while also reinforcing their self-confidence.

S0072

I Safe Swing

Product Dimension:

length width height
L:100 W:193 H:225

Developmental Support:

Climbing and swinging activities help children develop balance, coordination and gross motor skills while also gaining self-confidence.

This play set is a safe playground built with wooden support legs that provide high stability and fasteners that fix them. One part of the set includes a safe swing unit for young children, and the other part includes a climbing wall with colorful handles that develop children's motor skills. This durable structure, complete with a wooden platform at the top of the climbing unit, offers children both fun and physical development.

S0073

I Safe Slide

Product Dimension:
length width height
L:100 W:193 H:225

Modular Playset

It creates a safe playground in your garden while improving children's coordination skills with activities such as climbing and sliding.

This modular play set is a safe and durable structure built with wooden support legs that provide high stability and fasteners that fix them. It includes a climbing wall with colorful handles and a fun slide that develops motor skills for young children. It also creates a comprehensive entertainment area in your garden by combining a ladder, a high platform and a long slide module that develops children's motor skills.

TECHNICAL SPECIFICATIONS

We use **pine wood** in our playgrounds. Thanks to its natural structure, it is durable and long-lasting. All wooden surfaces are treated with an and coated with **water-based varnish** to protect them against external factors. All materials used are **certified according to EN71-3** and are suitable for children's health.

Safety is our top priority. For this reason, all edges are rounded and sharp corners are eliminated. In addition, the screws at the connection points are covered with **screw caps**, ensuring both a safe and aesthetically pleasing design.
